**Interim Compliance Report: Dricrete™ - Intelligent/Integral Concrete Waterproofing, Type S**  
ASTM C494/C494M – 16, “Standard Specification for Chemical Admixtures for Concrete”  
AASHTO M194/M194 – 13(2017), “Standard Specification for Chemical Admixtures for Concrete”  
AET Project No. 29-20291

Dear Mr. Yeiser:

American Engineering Testing, Inc. (AET) is pleased to present this report of our compliance verification testing of Dricrete™ - Intelligent/Integral Concrete Waterproofing. The attached report presents the interim test results of the referenced admixture. One 12-lb. bag sample of the admixture was received on May 25, 2018.

All sample preparation and testing was performed in accordance with the applicable sections of AASHTO M194M/M194M – 13(2017), ASTM C494/C494M – 16, “Standard Specification for Chemical Admixtures for Concrete” and all referenced documents. Based on our results through 28 days, Dricrete™ - Intelligent/Integral Concrete Waterproofing, Type S complies with the requirements in AASHTO M194/M194 and Table 1 of ASTM C494 for a Type S, specific performance admixture.

Concrete batching and test specimen fabrication was conducted on one day. Three control mixtures and three test mixtures containing Dricrete™ - Intelligent/Integral Concrete Waterproofing, both meeting the requirements of AASHTO M194 and ASTM C494 for fresh concrete properties, were produced. A commercially available vinsol resin air-entraining admixture was used for the concrete mixtures. Holcim Type I/II portland cement from the St. Genevieve plant was used for all concrete mixtures.

Product information and cement chemical and physical properties are presented in Tables 1 and 2. Aggregate properties and gradations are presented in Tables 3 and 4. Mixture proportions and results of testing are given in Tables 5 and 6.

If there are any questions with regard to this report, please contact me.

Sincerely,  
American Engineering Testing, Inc.
