

Scope of work

First and foremost, **dricrete**[™] comes to the party with multiple crystalline admix manufacturers. Our various engineers often can offer additional green building products enhancing the foundation of your structure bringing ancillary benefits to your owner.

Secondly, **dricrete**[™] will work with 1 member/laborer on your team (se habla español) to ensure that every cold joint; pipe penetration; tie hole; raker pocket and whaler is properly buttoned up and waterproof.

Thirdly, since you are choosing the concrete supplier and have more leverage as their customer; it will be up to you to get them to add the product in to their trucks and be responsible for the 'load fee'.

There you go, it's as easy as 1, 2, 3 to get a building out of the ground with the proven system of **dricrete**[™] 2 to 3 weeks faster without the hassles of a waterproofing subcontractor.

So, come on in the water's warm. Looking forward to working with you!!
